SBK-08 Structure putty powder

SBK-08 Structure putty powder

Specifications

Product specifications

- ❶ For use as a structure putty on hard concrete floors etc. or as shotcrete powder for repair works on exposed concrete surfaces (sintered layer).
- ❷ Can be mixed with shotcrete powder Be-dunkel and SBK-08 colour pigments and is suitable for use as structure putty for formwork structures and gaps between formwork elements.
- ❸ Use only together with SBK-08 Rep-hell and Be-dunkel SSP and only with the tested permanent impregnation Neutec LT 342, LT 344 und LT 425.

Storage:

Store dry. Keep the container always tightly closed.

Storage life:

12 months from delivery date until use

Disposal:

The product must not enter effluent or sewerage. Please comply with the applicable regulations for the proper disposal of waste on federal, cantonal and communal levels.

Instruction of use / processing

Primer (adhesive surface):

The substrate must be clean and free from dust, fat and oil.

SSP establishes a firm connection of upper and base material. Prime the base 2 times with pure M-10 (mixed water) for highly absorbent substrates (priming).

SSP Structure putty

Mix 1 part SSP with 0.3 to 0.6 parts **M-10** (mixing water) depending on the structure thickness.

SSP spray application:

For use with low-pressure sprayers 1 part SSP has to be mixed well with 1 part **M-10** (mixed water).

Processing temperature:

8° - 40°C.

Cleaning of tools:

The cleaning shall be conducted with tap water.

Technical data:

Form	Powder - "Contains Portland cement / white cement"
Colour:	whitish
Packaging / delivery form:	15 kg oval bucket
Storage suitability	Keep the container always tightly closed and dry.
Transportation regulations	Non-dangerous goods in terms of transportation.

Hazard warnings**"Contains Portland cement / white cement"**
